Hobbies

- Sports (jogging)
- Photo processing

About

Full-stack developer and solution architect with 15+ years of experience designing and delivering enterprise-grade applications. Specialized in SharePoint, .NET, and React ecosystems with proven success leading teams and building scalable workflow automation and data-driven solutions that optimize business processes.

Work Experience

Rocketta GmbH, Germany

Jun 2023 – present

Senior Software Developer

- Led design and development of multi-tenant HR workflow automation systems using SharePoint Online (SPFX – React and Typescript), Azure Services (C# and .Net Core), improved process transparency and reduced manual workload for business users.
- Built and maintained .NET API services integrated with SQL Server, SharePoint, Azure Service Bus, and MS Graph API. As a result, delivered secure tools for processing sensitive user data.
- Built background services with AI-based document processing, reducing turnaround time for approvals and improving accuracy.
- Designed scalable architectures and integration patterns for new components and microservices, , improving deployment speed and maintainability.
- Created full technical documentation and delivery plans, improving collaboration across international development teams.

Gazprombank, Russia

June 2008 – Jun 2023

Senior Software Developer

- Led the development of a unified employee reference system, integrating Staff, Salary, and Account systems using RabbitMQ and ODBC.
- Refactored legacy monolith into a microservices architecture (.NET Core 5, MS SQL, React).
- Managed full-cycle migration of the SharePoint intranet portal (SP 2010 → SP 2019) for 20,000+ users.
- Developed a correspondence tracking system using SharePoint 2019, reducing delivery losses and enabling full audit tracking.
